Parts List

(4) Webbing Guywires

(1) High Strength Recreation Net

(1) Rope Boundary Line

(2) Telescoping Poles

(4) 12" Steel Stakes

(4) Bungee Grass Stakes

(4) Carabiner Clips

1

Lay out your portable set on the ground to prepare for setup, keeping carabiner clips on hand or in your pockets.

2

On eachside, use a carabiner clip to attach (2) webbing guywires to the outside of the pole.

3

If you did not order to have your net pre-attached to poles, use a loop knot to attach to your poles using a carabiner clip.

We recommend making the loop so there is roughly 12" from the end of your net and the poles. By the end you should have 4 knots in total (top and bottom lines). You can wait till the end to tie the bottom lines.

4

Using a hammer or mallet, drive the 12" steel stakes into the chain links of your webbing guywires. Each stake should be 6 ft to 8 ft apart. Then extend the poles to your desired height and lift the pole into an upright standing position. Repeat on the other side.

5

You can play with the tension of the webbing guywires using the hanging straps attached to the buckle. Tighten as needed on both sides. You can also try adjusting the position of the poles to create tension.

6

Tie both bottom rope lines of the volleyball net to the poles to secure the net in place.

Unwind your boundary lines and loosely set them on ground. If you have 4 people, we recommend each person holding a corner and walking back to each perspective corner. You can use the stainless steel loops located near the poles / net as a centering mark.
